Fifty-seventh Annual Report

Eastern Dispensary
IN THE CITY OF NEW YORK

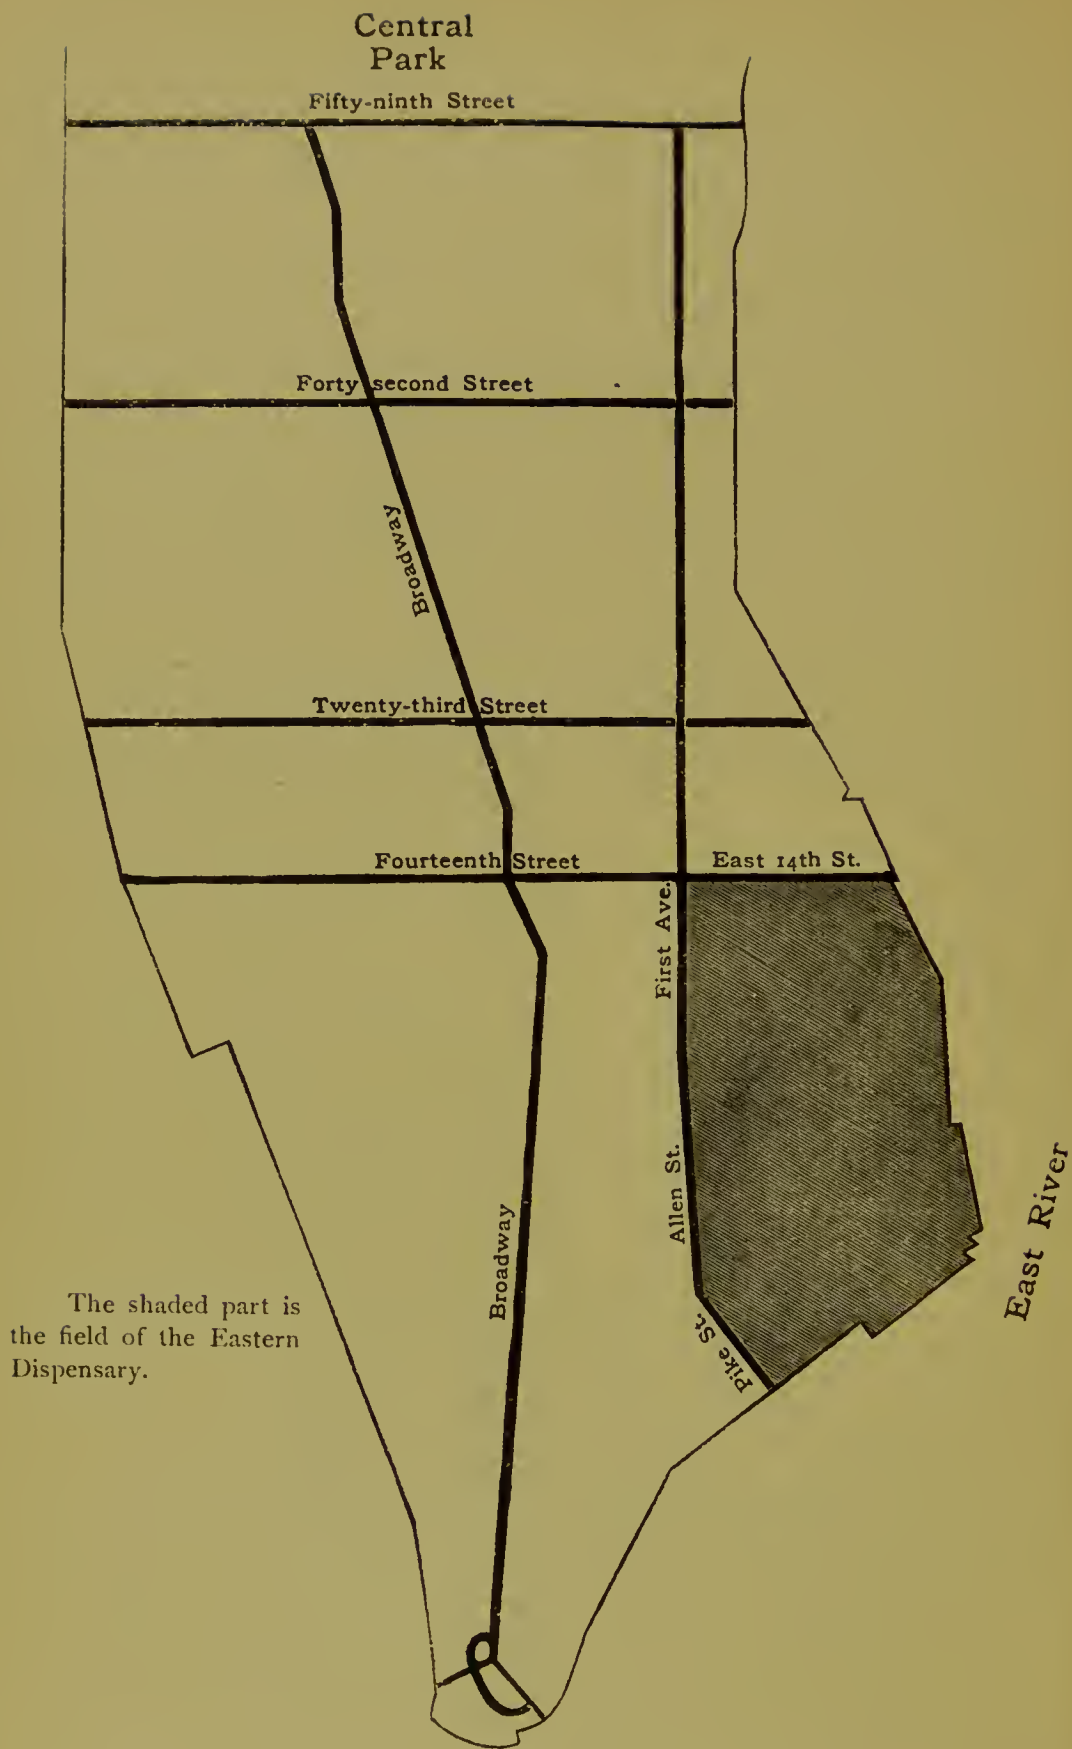

For the Year 1889

FIFTY-SEVENTH ANNUAL REPORT
OF THE

EASTERN DISPENSARY

IN THE CITY OF NEW YORK

FOR THE YEAR 1889

During the twelve months ending December 31, 1889, this institution supplied medical aid to 61,228 new patients who were seen by its physicians 106,506 times. This is the largest number of new patients treated by this Dispensary in any one year since it was organized in 1832, and it is a larger number of patients than was treated by any similar institution in this City during the year just ended.

The work done in 1889 as compared with that of 1888, shows an increase of 59 per cent. in the number of new patients treated and of 51 per cent. in the number of times they were seen by the medical staff. When compared with the record for 1887, the percentage of increase during 1889 is still greater as shown by the following table.

	1887	1888	1889
Patients treated	27,570	38,493	61,228
Prescriptions dispensed	39,691	58,659	76,666
Consultations and visits	48,589	70,597	106,506
Total expense	\$8,460.68	\$10,584.60	\$14,664 66

The large increase of patients in 1888 over previous years demonstrated to the Board of Trustees, as stated in the last annual report, that the rooms used for dispensary purposes were wholly inadequate for the proper performance of the work of the institution. Early last year it became evident

that the work of 1889 would be greater than that of 1888 and that a pressing necessity existed for rooms capable of proper ventilation and sufficiently large to avoid the overcrowding of patients and physicians. As the occupation by the Dispensary of a part of the Essex Market building was terminable at the pleasure of the City, the Board of Trustees was of the opinion that its efforts to secure better quarters should be in the direction of obtaining a permanent home for the institution.

The propriety of this action has been fully justified by the action publicly taken within the past few days by the City authorities who have decided to apply to the Legislature now in session for authority to sell the Essex Market and other public buildings. This action renders absolutely necessary the completion at an early date of a new home for the Dispensary.

Influenced by the considerations stated, the Board of Trustees purchased a plot of ground on the North-west corner of Broome and Essex Streets as a suitable building site. This location has the advantage of being readily accessible to the Dispensary patients and of being within one block of the place where the institution is now and for many years has been located.

Plans have been prepared for the erection on this lot of a building for Dispensary purposes. It is intended to leave a passage way of four feet between the westerly wall of the proposed building and the house adjoining so that all four sides of the Dispensary may have windows opening directly to the air and furnishing an abundance of light and ventilation. On the first or street floor provision will be made for an apothecary shop and rooms for the Visiting Physicians, Physician in Chief and his Assistant and for the isolation of cases of contagious diseases. The arrangements will be such that each patient on entering the building will be examined by a physician and if suffering from any contagious disease he will be at once removed from contact with all other persons and placed in a room by himself. The other stories contain, in front and rear, rooms for the attending physicians; the spaces in the middle of the building forming waiting rooms for patients.

From funds donated at various times, the Board of Trustees has appropriated \$38,000 towards the expense of purchasing the ground and erecting the proposed building. This sum is all that can be given without so decreasing the income of the institution as to impair its usefulness by making necessary a reduction in the number of its physicians. To complete the proposed building \$75,000 is needed and the Board of Trustees earnestly asks for contributions to make up this amount.

Since the founding of the Eastern Dispensary in 1832—a period of 57 years—it has afforded medical relief to the sick poor living in that part of the City bounded by Pike Street, Allen Street, First Avenue, Fourteenth Street and the East River. To-day this is the most densely populated part of the City. A large percentage of the people are of foreign birth and every year numbers of emigrants go directly from the ship to the tenement houses of this locality. The diseases these people suffer from are not due to intemperance or immorality but to ignorance, want of suitable food and the foul air in which they live and work. They are not idle but largely support themselves by manual labor. To such persons prompt medical assistance for even a slight illness means freedom from enforced idleness and from the consequent poverty, destitution and too often starvation of the sufferer and those dependent on him for support.

The benefits of the Dispensary's work are not confined to the persons who receive medical aid from it. Its physicians have extended opportunity for detecting contagious diseases in their early stages and by taking prompt measures they prevent the spread of such diseases throughout the City and become powerful agents for preserving the public health.

An incident which occurred last year will serve as an illustration. A patient, who applied for relief, was found to be suffering with scarlet fever. He was isolated from the other patients, notice was given to the Board of Health; he was removed to his home and placed in charge of one of the Dispensary's visiting physicians, who attended him constantly till he was well. This man lived in a crowded tenement,

and in common with its other occupants he earned a living by working with a sewing machine. The Board of Health exerted its authority: fumigated and disinfected the house, and all clothing made or in process of manufacture, and prevented further similar work in the building, till all danger of contagion was passed. It is easy to see the extent to which this dangerous disease might have spread, but for its prompt discovery.

The Dispensary has, therefore, a claim on every inhabitant of the city, in that it is an important branch of the public sanitary system.

The benefits of the institution are extended to all who are too poor to pay for medicine or medical advice. A charge of ten cents for each prescription is made those who can pay. Those who say they cannot pay, get their medicine free on the first application, and their names and addresses are sent to other organizations for investigation and report.

The Board of Trustees gratefully acknowledges the assistance received during last year from the United Hebrew Charities, the New York Association for Improving the Condition of the Poor and the St. John's Guild.

The Board of Trustees earnestly appeals for contributions to make up the sum necessary to complete the proposed Dispensary building.

It asks aid not for a new or experimental institution, but for one that has long been in existence, and is now provided with a corps of skilful physicians, thoroughly experienced in their work.

It asks aid for an institution whose benefits extend not alone to those who are directly ministered to, but to the public at large, who by the prompt action of its physicians are protected from the ravages of contagious diseases.

It asks that the Eastern Dispensary, which for fifty-seven years has given needed relief to the sick poor of this city, may be given a home and made a permanent institution for well-doing.

It asks those who hesitate to contribute to go to the present rooms of the Dispensary any afternoon, and see for themselves the people who are relieved, and the adverse circumstances under which the work of the institution is now done. The visitor will see numbers of poor and suffering men, women and children, who far from being ungrateful for the benefits they receive from efficient medical treatment, take frequent occasion to express in different forms their appreciation of the services rendered them. No act could speak more forcibly than that of a poor woman, who was found by the physician in charge cleaning the steps leading from the street to the Dispensary rooms, on the second floor of the building, and who on being asked what she was doing, replied: "The Dispensary cured me of my sickness. I have no money to give and I wanted to do something, so I thought I would clean these steps."

REPORT OF THE PHYSICIAN-IN-CHIEF

*To the President and Board of Trustees
of the Eastern Dispensary*

GENTLEMEN:

I have the honor to report that the number of new patients treated by the physicians of the Eastern Dispensary, during 1889, was 61,228, classified as follows: treated by the physicians at the Dispensary, 56,824; treated at the patients' homes, 4,404; a total of 61,228, and an increase over last year of 22,735, or 59 per cent. The total number of visits made by patients to the Dispensary was 95,238; the visiting physicians made 7,124 visits to the patients at their homes, and were consulted at the Dispensary 4,144 times. Therefore, the patients of this institution were either seen at the Dispensary or visited at their homes 106,506 times, or 35,909 times more than in 1888. During 1888 there were dispensed 58,659 prescriptions, during 1889 there were dispensed 76,666, an increase of 18,007 prescriptions.

I submit herewith tabular statements, showing in detail the work of the year.

I take pleasure in acknowledging the faithful and cheerful manner in which all of the physicians have served the Dispensary and in thanking them for the assistance they have rendered me in the daily work of the Dispensary.

Respectfully submitted

THOMAS T. GAUNT, M. D.

I. Affections consequent on
Parturition

Haemorrhage (post-partum)	2
Lacerated cervix	26
Lacerated perineum	14
Post-partum period	77
Puerperal sepsis	6
Subinvolution of uterus	9

J. Diseases of the Mammary Gland

1. In females

Abscess	125
Disturbances of lactation	32
Eczema of nipple	3
Fissure of nipple	29
Acute mastitis	38
Mastodynia	4
Rudimentary breasts	1

2. In males

Developing mammary gland in males aged 15, 16, 17 and 19 years	4
Inflamed nipple	1

3. In children

Developing mamma (1 gland) in girl of 12	1
Mastitis nascentium	3

K. Diseases of the Nervous System

1. Diseases of the Brain and its
Membranes

Aphasia	1
Congestion (cerebral)	3

	Cases
General convulsions (children) .	38
Hydrocephalus (chronic) (hydro- cephalus internus) .	8
“ (spurious) .	2
Insanity:	
a. Dementia	3
b. Hypochondriasis	5
c. Idiocy	7
d. Mania (acute)	1
e. Melancholia (acute)	10
f. Unclassified	3
Insolation	29
Insomnia	2
Insomnia	38
Meningitis	16
“ of convexity	1
“ (tubercular) (acute hy- drocephalus)	4
Microcephalia	1
Mutitas	1
Night-terrors	1
Polioencephalitis	1
Tumors of brain	3

2. Diseases of the Spinal Cord

Glosso-labio-laryngeal paralysis .	1
Locomotor ataxia	6
Myelitis	3
Poliomyelitis anterior (atrophic infantile paralysis)	26

3. Cerebro-spinal Diseases

Athetosis	2
Catalepsy	2
Cerebro-spinal sclerosis	2
Chorea:	
a. Unilateral	9
b. Bilateral	3
c. Facial (unilateral)	1
d. Lingual (cortical)	1
